HaloCode Standard Kit Sample Project Guide

Create with the hook & loop strap

With the hook & loop strap, you can tie HaloCode to your wrist. And the LEDs and touch sensor on the HaloCode allow you to make a wearable device, like a pedometer.

Let's turn HaloCode into a wearable device. In this project, you'll learn to create a project using the hook & loop strap.

This is what you're gonna achieve: Wear HaloCode on your wrist. As programmed, the LEDs illuminate a random color when the motion sensor on HaloCode detects the motions of your hand.

See more wearable projects at:
<http://docs.makeblock.com/halocode/>

1 Find the materials you need.

2 Write code and upload it to HaloCode.

when HaloCode is shaking

light up all LEDs with color R pick random 1 to 255 G pick random 1 to 255 B pick random 1 to 255

Note: Check **Quick Start Guide** to see detailed instructions on using mBlock.

3 Put the batteries into the battery holder.

4 Wear HaloCode to your wrist as shown below (left hand as an example).

1 Connect the battery holder to HaloCode.

2 Attach hook & loop fasteners to the sliding case of the battery holder and the back of HaloCode.

3

The fuzzy side
faces up.

4

Attach the battery holder to the
fuzzy area near the plastic buckle.

5

6

Completed!

Now, turn on the battery switch. Shake your hand to see the LEDs turned on!

Now you know how to use the hook & loop strap. Use your imagination to create more fun projects.
